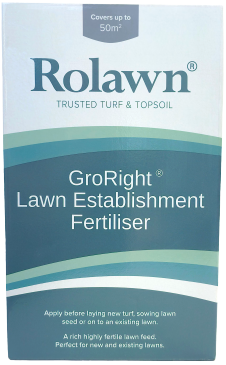
Rolawn®

TRUSTED TURF & TOPSOIL

Product Specification Sheet

GroRight® Lawn Establishment Fertiliser



A good root structure is important for a healthy lawn and, for this, a good supply of the correct nutrients is needed. This can be achieved by suitable preparation of the ground prior to laying turf or sowing lawn seed; ideally with an application of Rolawn's GroRight Lawn Establishment Fertiliser.

Formulated using a slow-release technology, which is key for promoting all-round plant strength, it is suitable for all soil types and for any turf or seed. The technical specification also makes it suitable for use as a top feed, to replenish the nutrients in an established lawn.

Specifications		
Bag size	2kg.	
Coverage	Approximately 50m^2.	
Classification and Performance	**Classification**	**Performance**
	• Smaller than average granules promote even distribution of nutrients within the soil, ensuring root establishment and protects turf from 'hot spots'. These mini granules control the release of fertiliser with precision, without affecting soil pH levels. • Over 70% of the nitrogen is slow release. • NPK Fertiliser 7:10:10 containing Magnesium and Sulphur with Manganese for early establishment of new lawns. • Contains Phosphate and Potassium.	• Promotes strong and rapid root growth. • Provides protection from root rot. • Feeds turf and grass seed from the roots up to give lawns the best possible start. • Improves drought and disease tolerance. • Feeds for up to 4 months. • Suitable for use as a top feed. • Can be used all year round in any soil types.

Storage: Store in a safe place away from children and pets.

A Material Safety Data Sheet (MSDS) is available for this product, on request. Please email **info@rolawn.co.uk**
